

NTC THERMISTORS: TYPE GT

GENERAL PURPOSE SENSOR

DESCRIPTION:

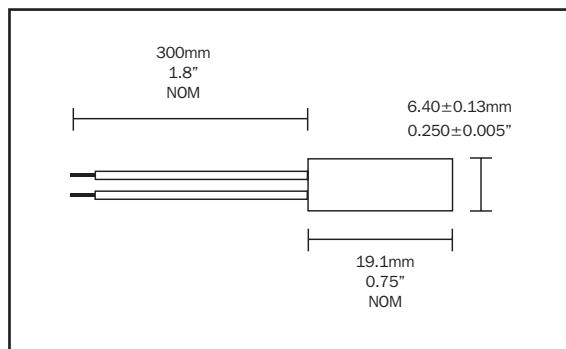

Type GT thermistors consist of a G type thermistor mounted in a semi-flexible epoxy resin and housed within a nickel-plated brass case. Connection is made with 7/0.2mm silver-plated copper conductors insulated with PTFE. Primary applications are temperature measurement and control.

DATA:

Resistance tolerance at 25°C±20%
B value tolerance±5%
Maximum temperature125°C
P_{max} at 25°C270 mW
Dissipation constant2.7mW/K
Thermal time constant2.8s self heating τ.....2.8 minutes external heating
Isolation voltage, case to leads400V

DIMENSIONS:

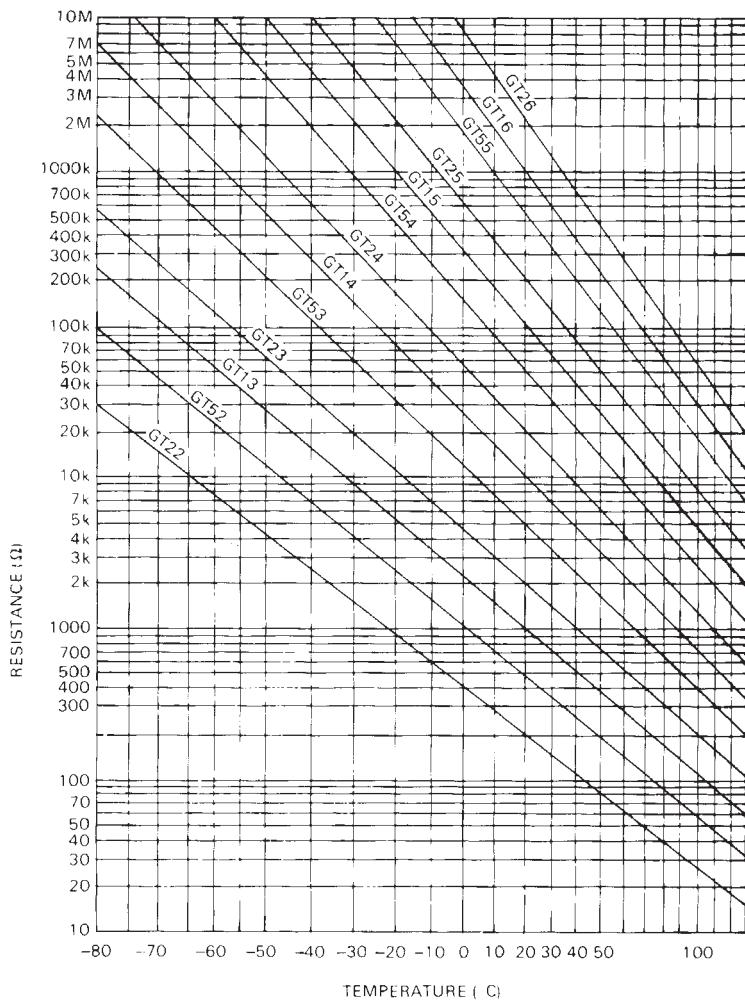

Code	R ₂₀ Ω	R ₂₅ Ω	R _{min} Ω	B ₍₂₅₋₈₅₎ K

NTC THERMISTORS: TYPE GT

GENERAL PURPOSE SENSOR

Nominal Resistance v Temperature Characteristics

For temperature measurement the electrical power dissipation within the thermistor should be limited so that the element temperature is raised by less than half the measurement resolution required. This prevents the thermistor from becoming oversensitive to the thermal conductivity of its immediate surroundings. If the thermistor is permanently situated in a stable environment more power may be dissipated.
